## AMENDMENTS TO THE CLAIMS

- (Currently Amended) Microspheres for allergy therapy containing antigens and/or DNA of antigens, eharacterized in that wherein the microspheres have a binding constant K<sub>B</sub> of at least 1 x 10<sup>4</sup> M<sup>-1</sup> toward the specific carbohydrate residue of intestinal and/or nasal epithelial cells.
- (Currently Amended) The M-microspheres for allergy therapy according to claim 1, eharacterized in that wherein the microspheres have an avidity K<sub>B</sub> of at least 1 x 10<sup>10</sup> M<sup>-1</sup> toward the specific carbohydrate residue of intestinal and/or nasal epithelial cells.
- (Currently Amended) The M-microspheres for allergy therapy according to claim 1 or

   characterized in that wherein the microspheres have substances on their surface which increase the adhesion to mucosal cells.
- (Currently Amended) The M-microspheres for allergy therapy according to any of the above claims, characterized in that wherein the specific carbohydrate residue is alpha-L-fluose.
- (Currently Amended) The M-microspheres for allergy therapy according to any of the above claims, eharaeterized in that wherein the substances on the microsphere surface are lectins.
- (Currently Amended) The M-microspheres for allergy therapy according to claim 5, eharacterized in that wherein the substance on the microsphere surface is a nontoxic lectin.
- (Currently Amended) The M-microspheres for allergy therapy according to claim 5 or 6, characterized in that lectin is edible.
- (Currently Amended) <u>The M-mi</u>crospheres for allergy therapy according to claims 5-7, eharaeterized in that wherein the lectin is Aleuria aurantia lectin.
- (Currently Amended) The M-microspheres for allergy therapy according to any of the above claims, characterized in that the microspheres have a diameter of from 0.1 to 100 um.

- 10. (Currently Amended) The M-microspheres for allergy therapy according to any of the above claims, characterized in that wherein the skeleton of the microspheres consists of polymers.
- 11. (Currently Amended) The M-microspheres for allergy therapy according to claim 10. <del>characterized in that</del> wherein the skeleton of the microspheres consists of polymers with functional groups.
- 12. (Currently Amended) The M-microspheres for allergy therapy according to either of claims 10 and 11, eharacterized in that wherein the skeleton of the microspheres consists of biodegradable polymers or copolymers.
- 13. (Currently Amended) The M-microspheres for allergy therapy according to any of claims 9-12, eharacterized in that wherein the skeleton of the microspheres consists of polylactic acid, polyglycolic acid or of poly(lactic-co-glycolic acid) copolymer.
- 14. (Currently Amended) The M-microspheres for allergy therapy according to any of claims 10 to 13, characterized in that wherein the Aleuria aurantia lectin is bound to the polymers by a covalent bond.
- 15. (Currently Amended) The M-microspheres for allergy therapy according to any of the above claims, characterized in that wherein the microspheres contain 0.1-20 wt.% of antigens and/or DNA of antigens.
- 16. (Currently Amended) The M-microspheres for allergy therapy according to any of the above claims, characterized in that wherein the antigens and/or DNA of antigens are allergens and/or DNA of allergens.
- 17. (Currently Amended, Withdrawn) The M-microspheres for allergy therapy according to any of the above claims, characterized in that wherein the antigens are mimotopes of the allergen Phl p 5 and/or of the allergen Bet v 1.
- 18. (Currently Amended, Withdrawn) A method for producing microspheres according to any of the above claims, characterized in that wherein the microspheres are first loaded with antigens and/or DNA of antigens, and the microspheres are then functionalized.

Page 4

 (Currently Amended, Withdrawn) Use of A method comprising administering the microspheres according to any of the above claims 1-17 to a subject for allergy therapy.
